

WordPress v2

With WordPress v2 you can integrate your posts & pages inside app

This new version doesn't require you to install a plugin and works with all WordPress versions from 4.7.0+ via the native JSON API.

General settings

First you will add the Feature to your Application.

After what you will see the following configuration page

The screenshot shows a configuration interface for the WordPress v2 feature. At the top right, there is a toggle switch labeled 'Activated' which is turned on. Below this, the 'Page name' is set to 'WordPress (v2)'. The main section is titled 'MANAGE WORDPRESS' and contains several settings:

- WordPress URL ***: A text input field containing 'https://korben.info'.
- Group all queries into a single list**: A checkbox that is checked.
- Show cover**: A checkbox that is checked.
- Cover 960 x 600 ***: A preview of a cover image with a blue gradient and a white WordPress logo. Above the image is a blue bar with the text 'Cover 960 x 600'.

Below these settings, there is a light blue informational box that reads: 'If your WordPress is secured by a login/password, and/or you want to display private posts you can set here a user to be used to retrieve posts.' Underneath this box are two input fields labeled 'Login' and 'Password'. A blue 'Save' button is located in the bottom right corner of the configuration area.

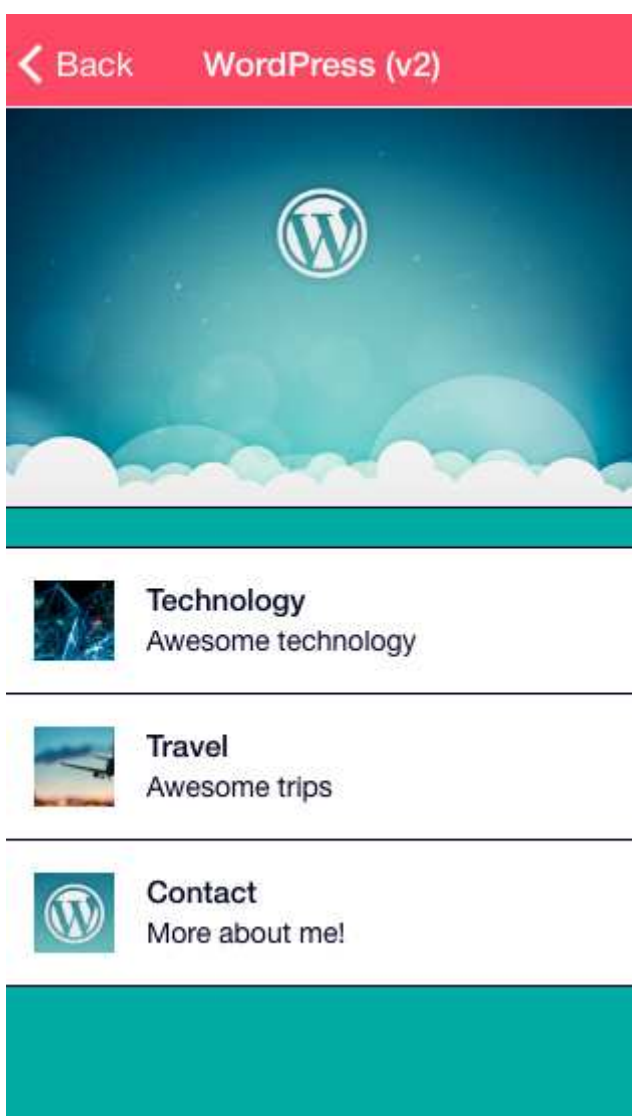

WordPress URL: This is the WordPress you want to fetch posts & pages from.

Group all queries into a single list: This one is a display option, in WordPress v2 you can build what we call "queries".

They are collection of posts and/or pages, choosing this option will group all the queries into a single list page like the picture below

Otherwise, when not checked, queries will be displayed like “categories/folders”

Show cover: this option applies only when the queries are not grouped, and will toggle the Cover display on the homepage.

Login / Password: If you want to access posts & pages secured by an account, input your credentials, otherwise leave them blank.

Query builder

Let's build our first query, here named "Technology"

ADD A QUERY +

Title

Subtitle

Show title & subtitle

Cover & Thumbnails are only visible when queries are not grouped.

Show cover

Cover 960 x 600 *

Thumbnail 512 x 512 *

You can mix posts & pages in the queries if needed.

Categories

- Inspiration (inspiration, 29 posts)
- Interview (interview, 40 posts)
- Jeux vidéo (jeux-video-videos, 81 posts)
- Korben (korben-videos, 4 posts)
- Musique (musique-videos, 54 posts)
- Nature / Espace (nature-espace, 52 posts)
- Photographie (photographie, 3 posts)
- Science (sciencevideo, 24 posts)
- Sécurité (securitevideo, 10 posts)
- Série (serievideo, 28 posts)
- Tech (tech, 76 posts)
- Tutoriels (tutoriels, 14 posts)
- Websérie (webserie-videos, 4 posts)

Pages

- Le Guide de Sécurité Nordnet – Entretien avec Matthieu Levisse (le-guide-de-securite-nordnet-entretien-avec-matthieu-levisse)
- Flux RSS (flux-rss)
- Liens (liens)
- Toutes les catégories (categories)
- CGU et Cookies (cgu)
- Contact (auteur)

The query builder fetched all available **categories** & **pages** from our previously configured WordPress, we selected “**Tech**” which contains 76 posts for our query.

Présentation de Korben.info

2:59

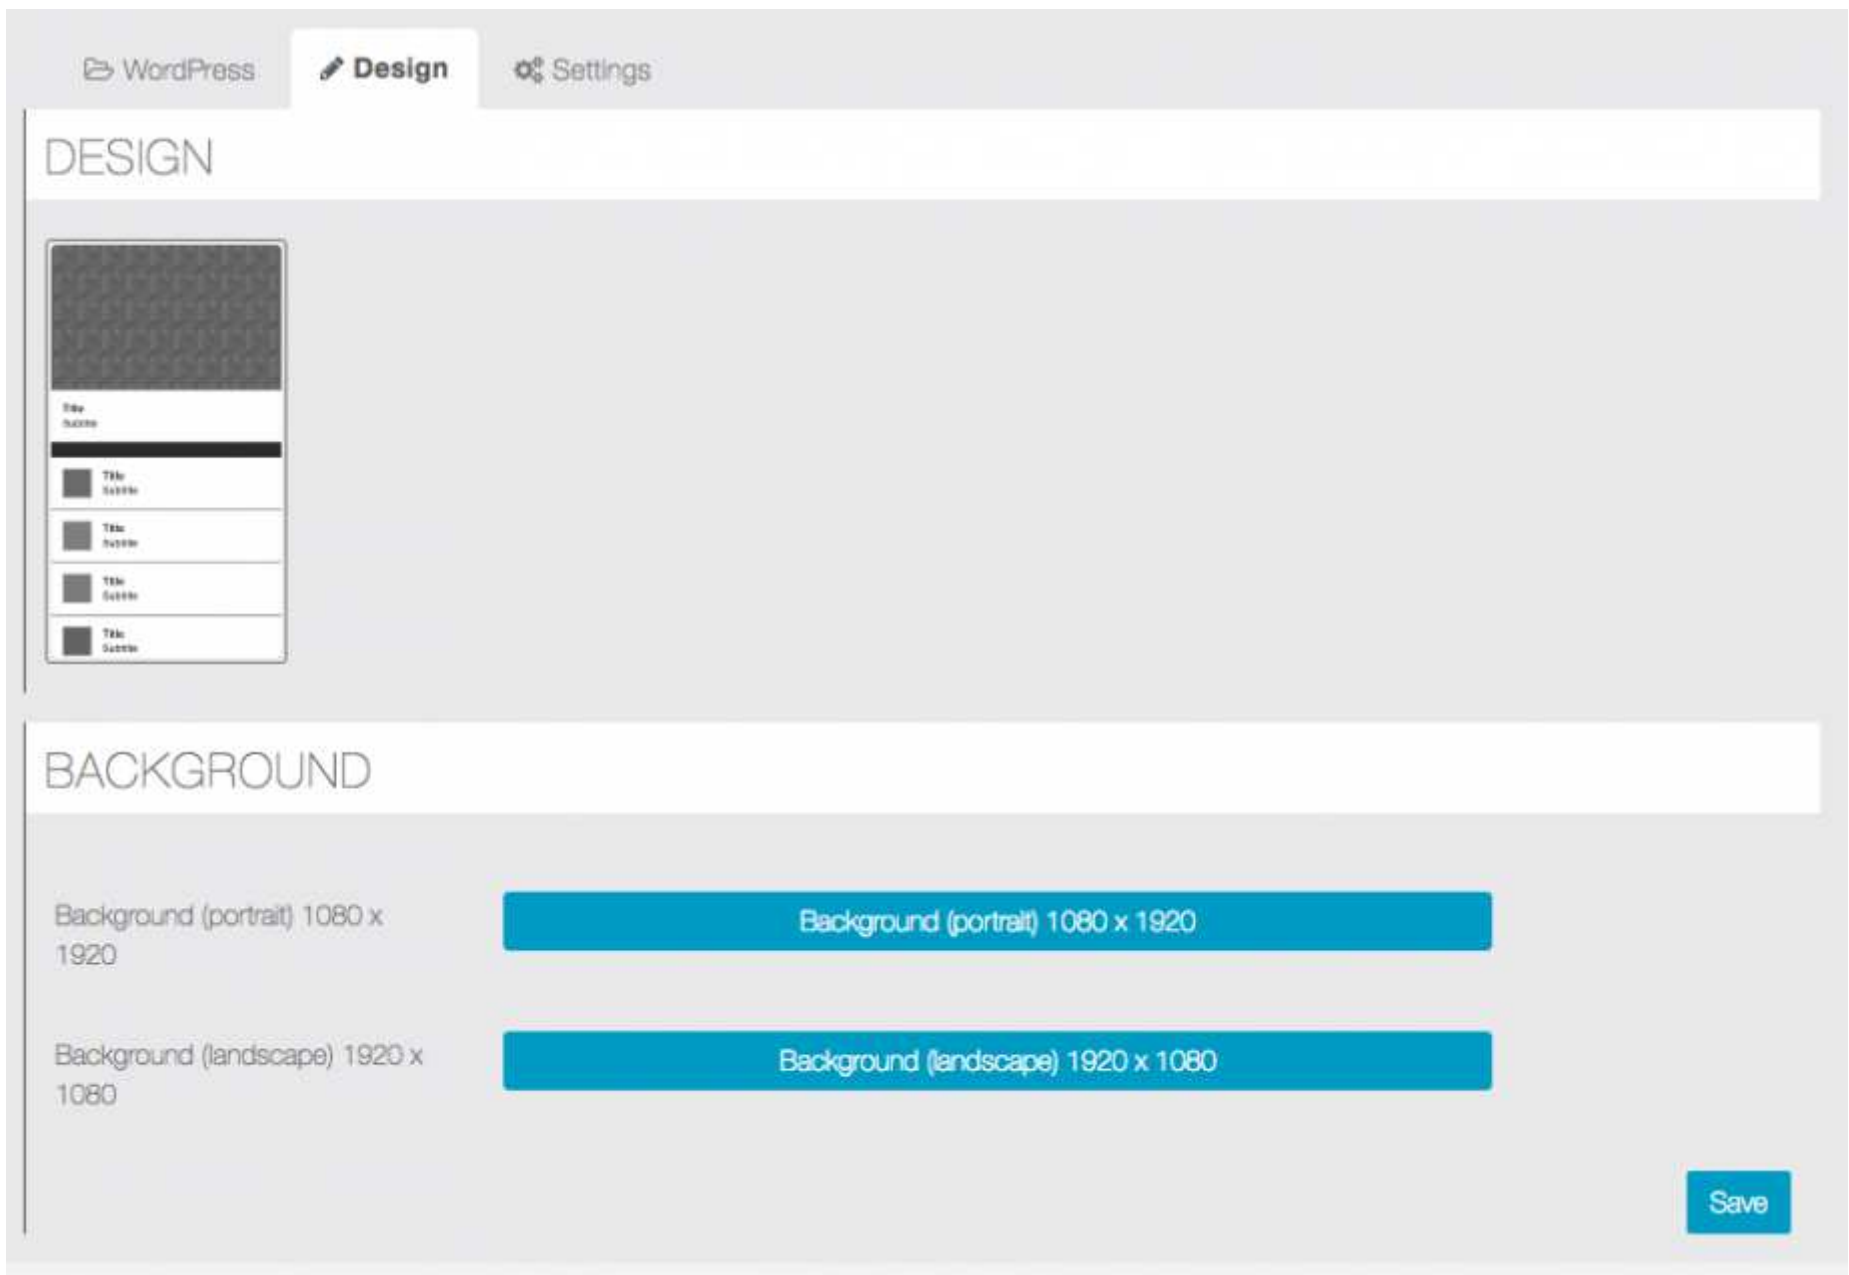

Bonjour,

Ce site web est un espace qui me permet de partager mes découvertes avec vous et me sert accessoirement de pense-bête ! N'hésitez pas à faire de même. Vous pouvez commenter librement en respectant les autres et en évitant le langage SMS s'il vous plaît.

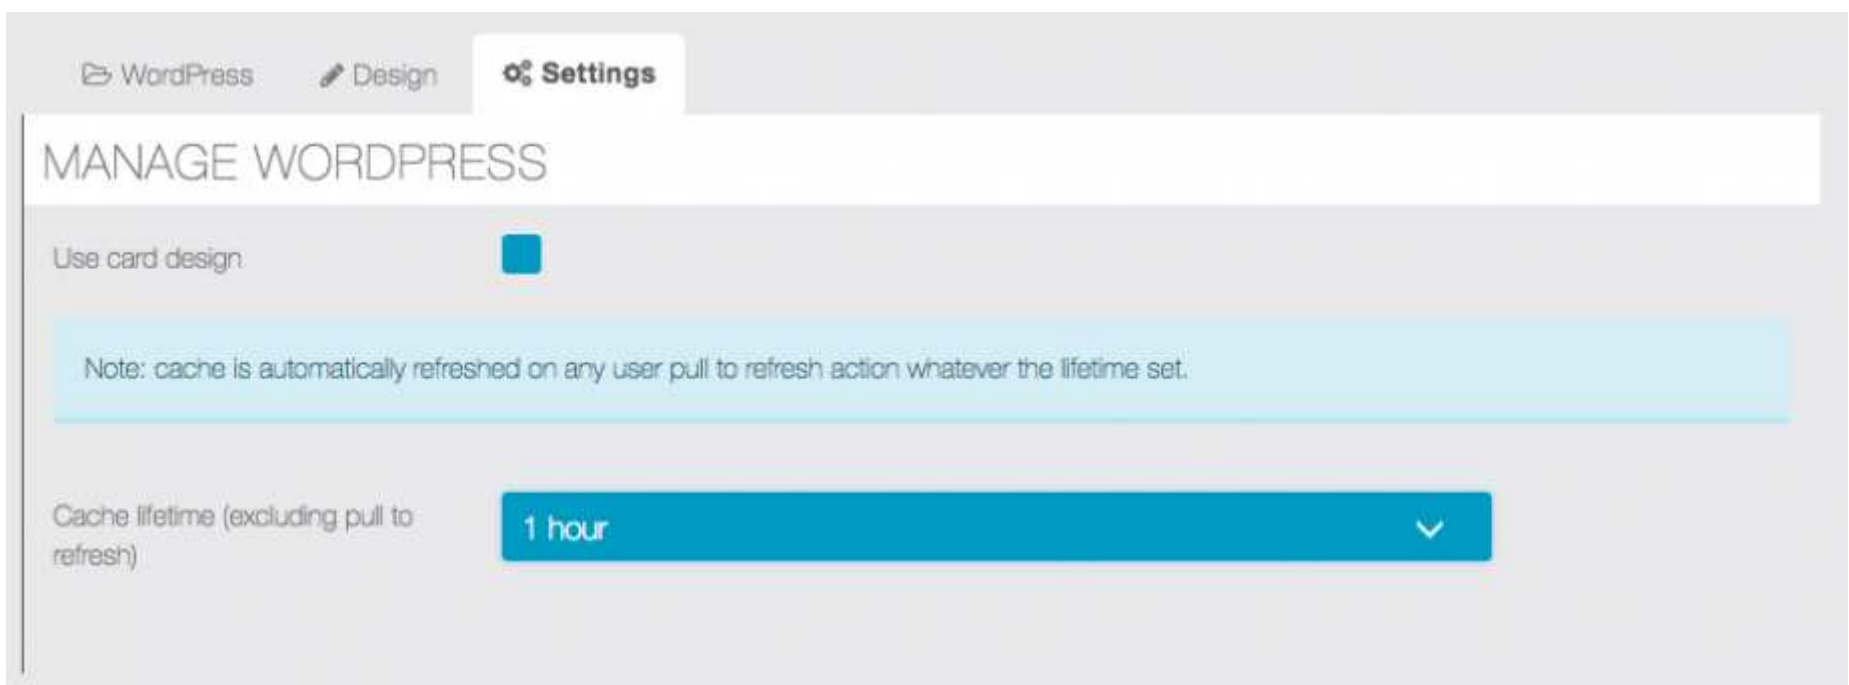

Pour toute question technique, problème informatique ou autre ayant un rapport avec votre ordinateur ou vos appareils tech, allez faire [un tour sur le forum](#).

Design

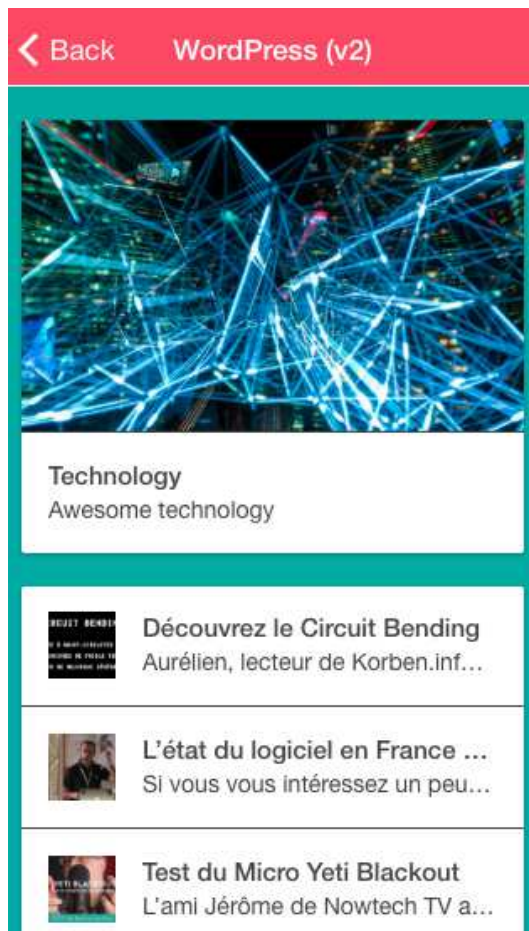

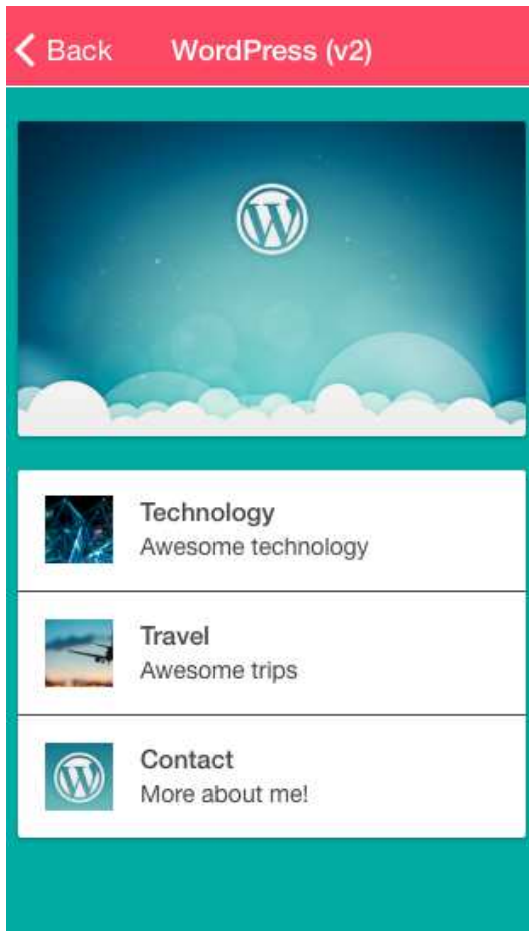

In the design section you can upload backgrounds for the feature.

Settings

The settings section offer two options, the first is the card design alternative

The second is related to the cache lifetime, to improve loading times and reduce load on the WordPress server, all queries are cached, however the in-app function “**Pull to refresh**” automatically rebuilds the cache to fetch fresh content.

Default cache lifetime is set to 1 hour.
