GRADES

+ Add a grade

SETTINGS

Show correct answers after each question

Results screen

- Show score
- Show correct answers percentage
- Show grade corresponding to score
- Show correct answers for every asked questions

Thank you message:

A rich text editor toolbar with the following elements: a 'Source' button, bold (B), italic (I), underline (U), strikethrough (S), and subscript (I_x) buttons, bulleted and numbered list icons, a link icon, and an unlink icon. Below the toolbar are buttons for image insertion, font color (A), a 'Format' dropdown menu, and a 'Size' dropdown menu. The main text area is currently empty. At the bottom left of the editor, the text 'body p' is visible.

Your users will see this message at the bottom of the result page once their quiz answers sent.

As you can see, there are 3 distinct parts:

- Questions: it's where you will create the questions of the quiz
- Grades: this optional part allows you to create grades for the persons who will take your quiz depending on their results
- Settings

First of all, let's see how to manage the questions. Click on "**Add a section**". Name your section and click on "**OK**".

Then click on "**Add a question**". You can add three types of information:

-  This is not really a question, but rather something you can add wherever you want to give instructions to those who take the quiz. Just enter your instructions and select the time limit for this text to be displayed. You can also add a picture if you want.
-  This is a Checkbox type of question, meaning that you can have several good answers. Just enter your question, the potential answers, and check for correct answers. When you select an answer as the right answer, you can also decide how many points this answer is worth.
-  This is a Radio type of question, meaning that only one answer can be the answer to the question. Just enter your question, the potential answers, and check the only correct answer. When you select an answer as the right answer, you can also decide how many points this answer is worth.

N.B.: If you don't assign points to a correct answer (0 point) it will not be taken into account in the percentage of correct answers.

Now let's have a look at the logical triggers offered with this feature. To add a logical trigger for the question you are currently editing, just click on "**Add a logical trigger**". You will be offered the following options:

The screenshot shows a 'Manage logic triggers' panel. On the left, a dropdown menu is open under the label 'When answer is:'. The menu items are 'Skip to question:', 'Hide question:', and 'End quiz'. The 'Skip to question:' option is selected, indicated by a checkmark. To the right of this menu is another dropdown menu labeled 'Answer 1' with the text 'Which one is the heaviest'. At the bottom right of the panel is a blue button labeled 'Delete'.

- Skip to question: select the question you want to skip to (you can skip several questions by doing that).
- Hide question: select the question you want to hide.
- End quiz: this will... end the quiz!

You can decide if you want to use one of these actions depending on the answer which is given by the user, or if you want to always use this action. When you're done, click on "**Ok**" at the top of the menu.

Now let's see what the grades are made of. Keep in mind that grades are optional, they are just there to help you add some more fun/information to your quiz. To add grades, just click on "**Add a grade**". This appears:

Add a grade:

Grade name:

Score range:

From to ↕

Grade summary:

Source **B** *I* U ~~S~~ *I*_x [List icons] [Link] [Image]

A - Format - Size -

body p

You can create as many grades as you want.
First, choose a name for your grade.

Then choose the score range for this grade. You have two options:

- A score range depending on the percentage of correct answers
- A score range depending on the number of points earned during the quiz (if you remember, you can choose the number of points given for each correct answer).

Finally, enter a description for this grade.

Once you're done, just click on "**Save**".

Then go to the “Settings” part, and select which settings you want to use. You can even write a “Thank you” message which will be displayed in the end of the quiz.

SETTINGS

Show correct answers after each question

Results screen

- Show score
- Show correct answers percentage
- Show grade corresponding to score
- Show correct answers for every asked questions

Thank you message:

Source | **B** | *I* | U | ~~S~~ | *I*_x | [List Icons] | [Link Icon] | [Image Icon] | **A** Normal | Size
