

MCommerce

With the Commerce feature you will be able to sell your products from one or several store. Users will be able to pay online via Paypal or Stripe, to pay at your store or at the delivery.

Note: Every stores you will create, will have the same catalog, see it like a “franchise”.

Let's go! To add “Commerce” feature in your app, click on

PAGE SETTINGS

	Page name: <input type="text" value="Commerce"/>	Activated <input checked="" type="checkbox"/>	Social Sharing <input checked="" type="checkbox"/>
MY STORES		<input type="button" value="+"/>	
BACKGROUND		<input type="button" value="v"/>	

1. Create a store

Click on  to add a store and fill out your store's info:

< STORE INFORMATION

San Francisco - Market Street

San Francisco, CA

youremail@email.com

United States

1234 Market Street

+11234567890

94102

Monday-Friday 8AM to 10PM

Then add your delivery options:

DELIVERY

Delivery methods: *

In store

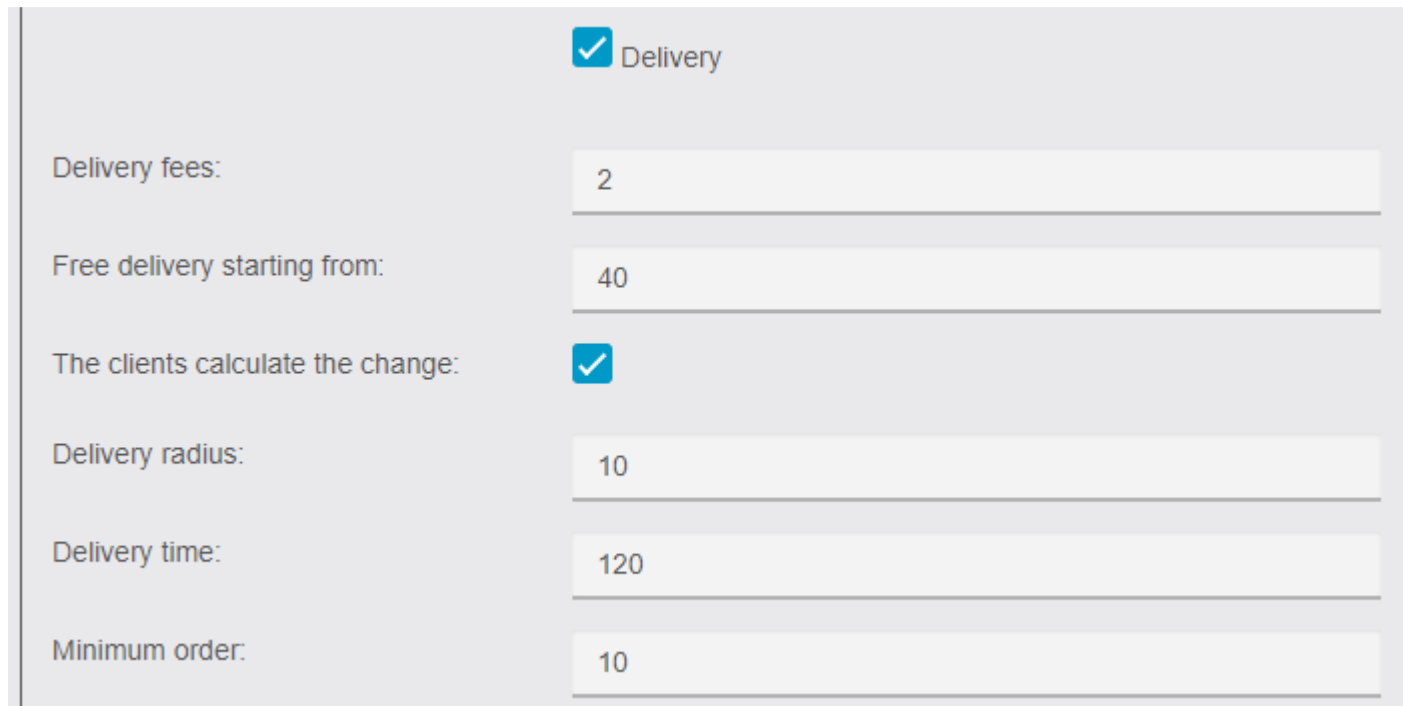

Carry Out

Delivery

You can choose from:

- **“In store”**: Your clients will have to come to the store

- **“Carry out”**: Your clients will have to come to the store to get the product and then leave the store with the product
- **“Delivery”**: You can deliver your goods to your clients
If you choose “Delivery”, some other options are displayed:

The image shows a configuration form for delivery settings. At the top, there is a checked checkbox labeled "Delivery". Below this, there are several input fields:

Delivery fees:	2
Free delivery starting from:	40
The clients calculate the change:	<input checked="" type="checkbox"/>
Delivery radius:	10
Delivery time:	120
Minimum order:	10

- **“Delivery fees”**: The cost of the delivery
- **“Free delivery starting from”**: If you want the delivery to be free when the order reaches a certain price
- **“The clients calculate the change”**: Add a field at the end of the order where the client will specify the type of cash he will use. For example, if he uses a 50\$ bill, you will be notified
- **“Delivery radius”**: Indicate the area you deliver from your store address, in km

- **“Delivery time”**: The average time of delivery, between the order and the start of the delivery, in minutes
- **“Minimum order”**: Set the minimum price for a delivery
Then add your payment options. If you choose Paypal, you’ll need to do some mandatory operations in your Paypal account, [click here](#) to see how you have to set up your Paypal account to enable it in your app. You can also pay by credit card when you pick up your order / upon delivery or you can directly pay by credit card online. To do that you just have to select the option **“credit card (online payment)”** and fill out the two sections “Secret Key” and “Publishable key” you obtained on [Stripe](#). If you don’t know these keys, just check out this [page](#) to know how to get them.

PAYMENT

Payment methods: *	<input checked="" type="checkbox"/> Paypal
	<input checked="" type="checkbox"/> Cash
	<input checked="" type="checkbox"/> Check
	<input checked="" type="checkbox"/> Meal Voucher
	<input checked="" type="checkbox"/> Credit card (pay upon pickup or delivery)
	<input checked="" type="checkbox"/> Credit card (online payment)
Username: *	<input type="text" value="Username"/>
Password: *	<input type="text" value="Password"/>
Signature: *	<input type="text" value="Signature"/>
Stripe settings	
Secret Key: *	<input type="text" value="Secret Key"/>
Publishable Key: *	<input type="text" value="Publishable Key"/>

Then, create a Tax for your Store:

TAX

Tax rate: *

Save by clicking on 

2. Create categories for your products

Go to “**Catalog**” and click on “**My categories**”:

Page name: Activated Social Sharing

Stores **Catalog** **Orders** **Settings**

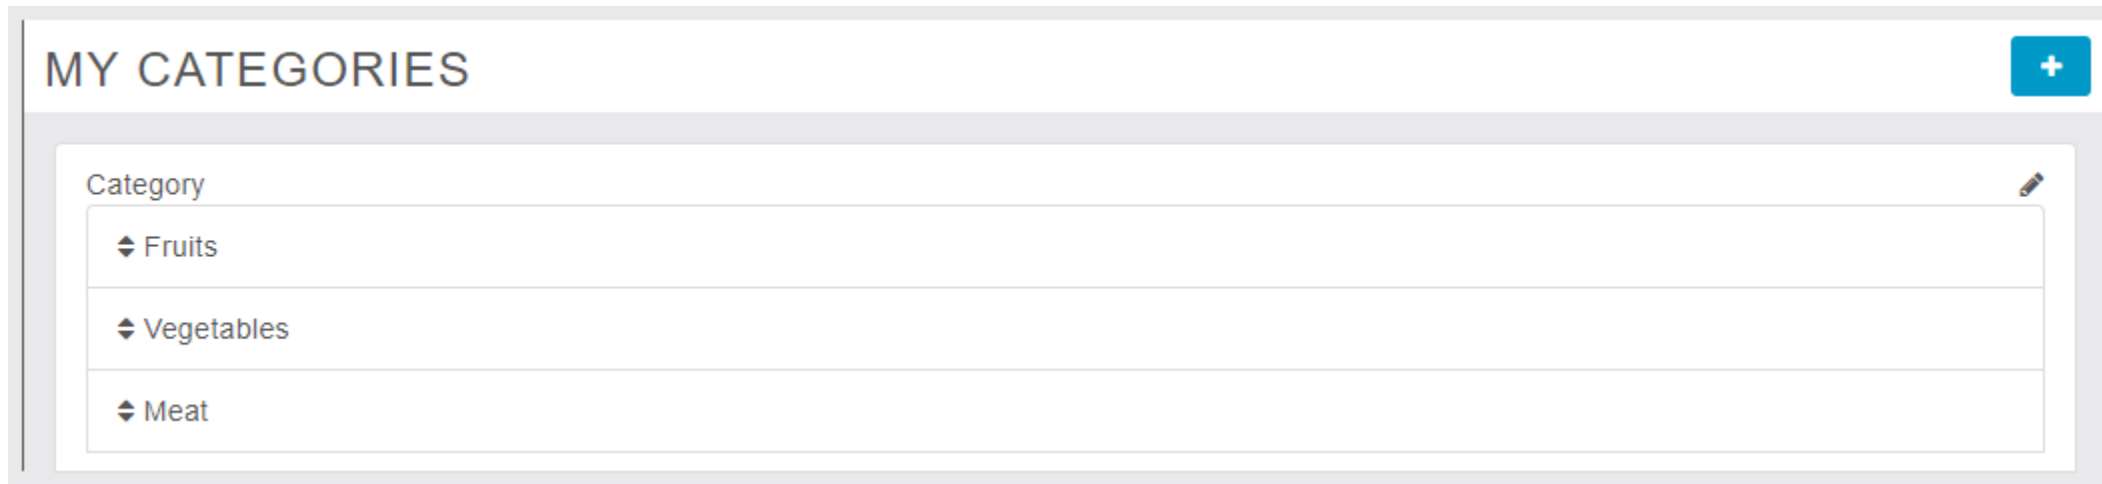

MY STORES My categories My products 

Click on  to add your categories:

Category	Title *	Subtitle		
	<input type="text" value="Fruits"/>	<input type="text" value="Fresh fruit from local farmers"/>		

 

A first one is automatically created but won't be shown to users. It's your root category but once again it will not be shown to users so you can leave it like that. Select it and click on "+" to add a subcategory (in fact, as the root category is not shown, this new category will be a main category). Add as many categories and subcategories as you need:

3. Create products

Click on "My products" from the main menu in "Catalog":

Click on  to add a product:

CREATE A NEW PRODUCT

OK

Product name:

Batavia Lettuce

Description:

Source | **B** | *I* | U | ~~S~~ | *T*_x | [List icons] | A Normal Size

Fresh lettuce from the farm "Lettuce paradise".

body p

Tax:

20%

Price:

0.30

(without taxes)

Picture:

Add pictures

You can add some sizes/variants to your product. Switch on Product Formats and then fill out sizes/variants information of your product, with a price for each. Note that if you activate this function, you won't be able to change the price of your product in the main menu as you did just before. The price displayed in the app will be the smallest one ("from 0.30€" for example).

PRODUCT FORMATS

	Format	Price
1st	<input type="text" value="Small one"/>	<input type="text" value="0.30"/>
2nd	<input type="text" value="Big one"/>	<input type="text" value="0.50"/>

You can also add some options to this product. By options we mean sauces, complementary products, etc.

First, create a new options group:

EDIT THE OPTIONS GROUP SAUCES

Name of the options group:

At least one option is required:

If you check “**at least one option is required**” the user will have to choose from the sauces you offer when he orders the product. He will not be able to order without choosing one of these options (that’s useful when you have many sizes for a product, as we will see next).

Don’t click on  yet, click on  next to “**Add options**” and add the name of the options you want.

Click on  to save.

Now, in your product details page you can see your options below:

MY PRODUCT'S OPTIONS

 Services

Washed Price:

You can also choose to create an option list, for example you are selling sandwiches, and you want your clients to pick one sauce from a list:

MY PRODUCT'S LIST CHOICE OPTIONS

CREATE A NEW CHOICE LIST GROUP

OK

Name of the options group:

Sauces

At least one option is required:

ADD OPTIONS

Option name:

Ketchup

Option name:

Mayonnaise

Option name:

Samourai

Then check the categories for your product:

MY PRODUCT'S CATEGORIES

Fruits

Vegetables

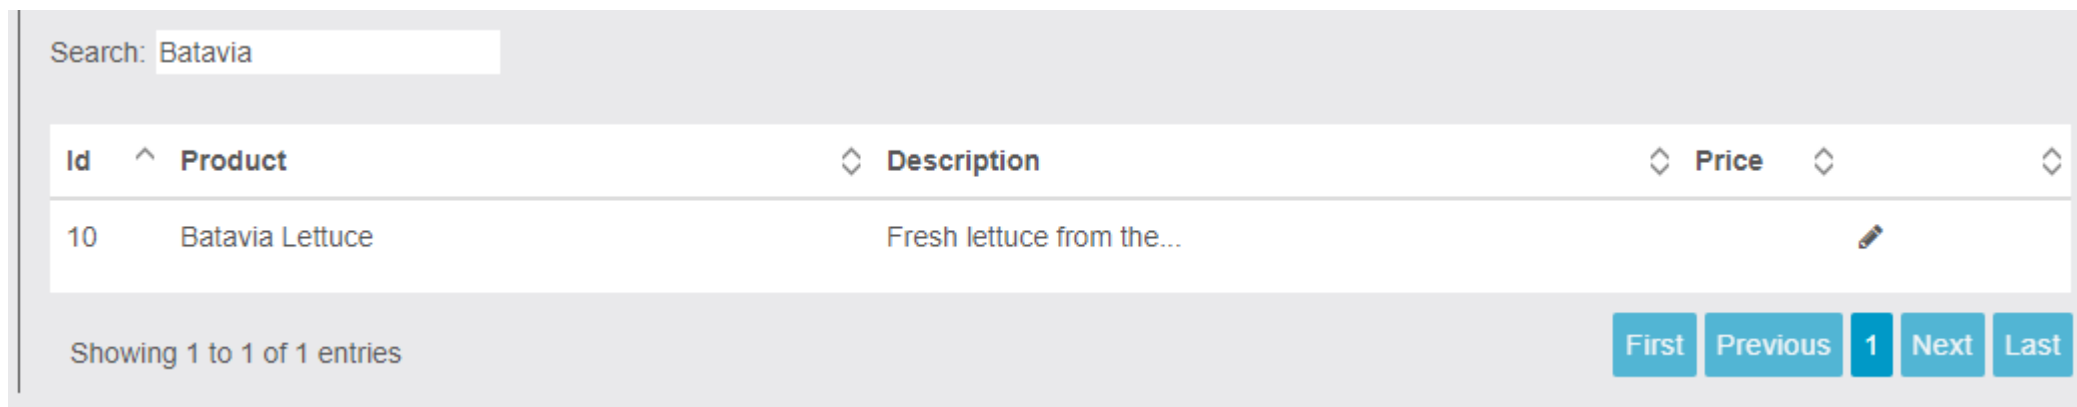

Meat

And click on **OK** at the top of the page to save your product.

You can also duplicate a product if you want to create a new product that doesn't have many differences from another one:

If you have many products in the feature, it can be difficult to scroll to find the one you are looking for. That's why we implemented a search bar, where you can type its name and find it easily.

4. Manage

In the "Orders" menu, you will be able to see and manage the orders you receive.

In the "Settings" menu, you will be able to manage the fields required during the order. You can either choose to make a field mandatory, optional, or simply hide it from the form. Let's look at an example:

Page name: Commerce

Activated

Social Sharing

Stores Catalog ▾ Orders Settings

MANAGE USER FIELDS

Phone number	Hidden ▾
Birthday	Hidden ▾
Invoicing address	Mandatory ▾
Delivery address	Optional ▾

Save

And let's see the result inside the app when ordering:

< Back

My information

Next

First Name * Luke

Last Name * Skywalker

Email * luke.skywalker@gmail.com

📍 Delivery address

Street

Postcode

City

📄 Invoicing address *

Street

Postcode

Furthermore, if the user has already created an account in the app and is logged in, some information will automatically be retrieved by the MCommerce feature to fill parts of the form, as you can see in the example above.

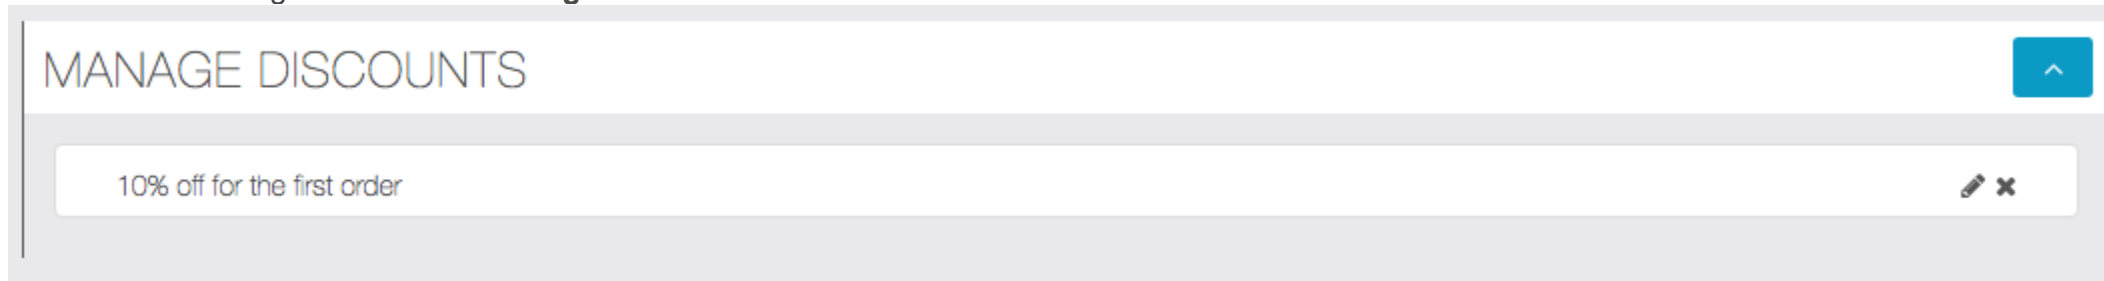

Then, you will be able to create discounts:

CREATE A NEW DISCOUNT

<OK

Enabled	<input checked="" type="checkbox"/>
Label	<input type="text" value="10% off for the first order"/>
Code	<input type="text" value="10%FIRST"/>
Minimum amount	<input type="text"/>
Discount type	Percentage ∨
Deductable	<input type="text" value="10"/>
Validity date	<input type="text"/>
Usable once	<input checked="" type="checkbox"/>

- **“Enabled”**: You can enable it right away or disable it for now. You will be able to enable it whenever you want after the creation
 - **“Label”**: It’s the name of the Discount
 - **“Code”**: Your client will use this code to activate the Discount
 - **“Minimum amount”**: Set a minimum amount on the checkout to activate the discount. Leave it blank if there is no minimum amount
 - **“Discount type”**: **“Fixed”** for fixed discount, for example 10€, **“Percentage”** if you want to deduct a percentage
 - **“Deductable”**: It’s the amount you want to deduct, in your currency if you chose **“fixed”**, in percentage if you chose **“percentage”**
 - **“Validity date”**: Fix a validity date if you want one, leave blank if not
 - **“Usable once”**: Check this if you want your Discount to be used only once
- You can then manage them in the **“Manage Discounts”** tab:

You will also be able to link, for each store, a **Connected printer** to your app to print orders when they arrive. Make sure your printer is compatible, it will need an email address:

CONNECTED PRINTERS

You have a connected printer? Enter the email address

San Francisco - Market Street

Save

You can also setup more taxes if your products don't use the same taxes:

CREATE A NEW TAX

OK

Tax name:

Another Tax

Tax rate:

Troubleshoot

I can't add a product to the cart:

- You have not created a category (other than the root one)
- or you have not associated the product to a category
- or you have not associated the product to a tax.
